EDUCATION

Moraine Valley Community College

Associates in Applied Science

Palos Hills, IL

Aug. 2023 – May 2025

University of Illinois Chicago

B.S. Computer Science

Chicago, IL

Aug 2025 – Present (Expected: May 2027)

PROJECTS

Benito Juarez Men's League Platform | React + TypeScript, FastAPI, SQLite, Vercel, Git Mar. 2026 – Present

- Built and deployed a production operations platform for a Chicago men's baseball league supporting league leadership, 10+ team managers, and 1,000+ site visitors.
- Developed scheduling, standings, team rosters, announcements, and admin workflows to replace fragmented manual coordination.
- Implemented role-based access controls restricting roster edits and lineup submissions by team ownership.
- Designed CSV import pipelines and per-game lineup tracking to improve roster verification and reduce administrative overhead.

PitchSearch | React + TypeScript, FastAPI, SQLite, Docker, Vercel, Git Oct. 2025 – Dec. 2025

- Built and deployed a full-stack analytics web application enabling interactive search and filtering across pitch-level MLB data.
- Implemented a FastAPI REST backend with structured SQLite queries to support efficient multi-parameter filtering across large datasets.
- Developed a responsive frontend with dynamic filters, sortable results, and detailed pitch views for exploratory analysis.

AI Market Map Generator | Next.js, TypeScript, Tavily API, OpenAI API, Vercel, Git 2026 – Present

- Built a market analysis platform that uses web retrieval and LLM inference to identify top competitors, generate strategic positioning maps, and highlight market gaps.
- Integrated Tavily web search to retrieve real-world company data and reduce hallucinated outputs during competitor analysis.
- Designed caching and synthesis workflows for axis generation, competitor placement, and insight generation across market categories.

Natural Language Query Explorer | React + TS, FastAPI, SQL, Vercel, Git Dec. 2025 – Dec. 2025

- Built a full-stack NL2SQL web app that converts natural-language prompts into validated SQL queries over user-uploaded datasets.
- Designed CSV ingestion and structured tabular parsing for interactive querying and server-side SQL execution.
- Integrated GPT-based query generation with validation, safe execution, and fallback handling through FastAPI endpoints.

EXPERIENCE

Software Developer Intern

Chicago Tire and Auto

May. 2024 – Aug 2024

Burbank, IL

- Developed web application using WordPress, Google Apps Script, and JQuery technologies.
- Collaborated effectively with client about feature requirements and implementation.
- Streamlined the vehicle checkout workflow for 5 customers/day over 6 months by automating form intake and digital logging, improving record completeness by 100%.

Package Handler

UPS - United Parcel Service

Aug. 2022 – Present (3+ years)

Hodgkins, IL

- Owned bulk package flow for the dock, consistently meeting scan accuracy and throughput expectations
- Maintained high-throughput loading/unloading performance in a time-critical dock environment
- Ensured correct routing and organization across trailers to support on-time outbound operations

TECHNICAL SKILLS

Languages: C/C++, Java, JavaScript, TypeScript, Python, SQL

Frameworks: FastAPI, React, Node.js, WordPress

Tools: AutoCAD, Git, UNIX/Linux, VS Code, Vercel

Data: MySQL, Power BI
